

Procedures For Breast MRI

Breast MR Procedure (CPT) Code |

76094	– bilateral breast with and without contrast
76093	– unilateral breast with and without contrast

Special Note: While there is a CPT code for unilateral breast imaging, our imaging protocol always recommends imaging of both breasts.

Most Commonly Used Diagnosis Codes |

611.71	– Pain in breast
611.71.1	– Lump/mass in breast
611.8	– Other specified breast disorder
611.9	– Unspecified breast disorder
611.79	– Symptoms breast discharge-other
174.9	– Cancer breast
238.3	– Breast neoplasm
610.0	– Cyst of breast
610.1	– Cystic breast
611.1	– Hypertrophy breast
611.0	– Inflammation of breast

Breast MRI is a covered service by Medicare and most other commercial health insurers.

Other Special Information

1. A prescription and complete history of breast symptoms, problems or surgeries is required.
2. Any prior mammogram, breast ultrasound, or breast MR films are needed at the appointment for comparison to the current study.
3. All patients except those being evaluated for breast implant rupture will receive an injection of a contrast agent called gadolinium at the appointment. Gadolinium is well-tolerated by nearly all patients.
4. The breast MRI examination is quite comprehensive and the appointment may take longer than other MRI examinations. Patients may be briefed on appointment length prior to their examination by a Southern Tier Imaging scheduling representative.
